

Skywind Application

TESRenewal Username: Clawshield

Country of Residence: Canada

Timezone: UTC -08 (Pacific Time)

Interested in: Animation, Coding/Scripting/Mechanics

Level of Commitment: Moderately active

Skills and Experience: -I have over 10 years doing programming and IT professionally in various capacities including IT Management for an organization with 15 locations and 900 employees.

-Studied computer science at university, learned OO programming in Java (using netbeans mostly but also eclipse).

-I know my way around Java, perl, php, html5/css3, python, C, javascript, databases, etc, and I can learn new languages/protocols quickly.

-I'm quite familiar with git, it's integral to my dev process, I use it to develop

locally on a vagrant/puphpet server and then merge changes into master when ready for release and push to my live server.

-Bit of experience with CK and Papyrus: currently working on an improved version of Sothco's Guild Starter mod where I fixed a few buggy things, reworked most of the dialogue, made it less overpowered, and made a better recruiting sequence where the recruit kneels down and swears allegiance to you. It's almost ready for release. I'm using CK via MO with SR:LE and using git for versioning as I develop it.

-I have some other mod dev plans, been modding since Oblivion just getting into making mods recently but have plenty of skills I could contribute towards TESRenewal projects.

-Example of recent work is the website for a yoga studio which I'm building iteratively with hand coded php/html5/css3 and a bit of javascript. It's around v0.7, a few more core features to add before calling it v1 but it's already quite functional and integrated into many aspects of the business. Part of the data layer is an implementation of the API for the software platform that the business runs on (called mindbody).

-This would be my first time contributing to a project like this, I'm familiar with github but haven't used it. I'm sure I can get up to speed quickly. I'm also willing to spend some time getting familiar with more tools if needed.

-Cats, you say? I have several. I've linked to the newest one.
