TESRenewal Username: dasmotiu

Country of Residence: USA

Timezone: UTC -05 (Eastern Time)

Interested in: Coding/Scripting/Mechanics,Voice Acting,Writing,Coding

Level of Commitment: Moderately active

Skills and Experience: Retired IBM Software engineer, (34 years) have written code in more languages than I can remember, most recently Java before retirement. Don't know Papyrus but I feel fairly confident I could pick it up.

Would like to do modding, over 500 hours logged on Skyrim, have 60-odd mods installed. Have dabbled with CK, nifscope, and have Autodesk 3ds Max installed, have imported and exported Skyrim armor and body meshes etc, limited experience with it, but I could do grunt work if given enough guidelines.

Long experience in public speaking, classes, seminars, conferences, in front of important clients, which maybe could transfer to voice acting. I have a lightweight voice (some would say high-pitched) with an unmarked RP (ie BBC British) accent, very slightly Americanized by 28 years in the USA. I can do some regional British accents quite well.

I have two history websites, so I transcribe documents for the web as my current retirement project, which as you might imagine requires a high level of detail nitpicking. 30 million words online, HTML5 CSS generated by my own software from Microsoft word documents, so zero HTML errors and very few typos remaining. See www.tothosewhoserved.org and <http://www.tothosewhoserved.org>.

I have a deep love/obsession for the English language, both vocabulary and grammar, so I could "improve" text that has been written, and contains the right technical information, but might need "tweaking".

I speak French fluently but am rusty. 7 years living in French-speaking countries.
