Skype Username: zachary.griffeth

Country of Residence: United States

Timezone: UTC -06 (Central Time)

Interested in: Coding/Scripting/Mechanics,Writing

Level of Commitment: Highly active

Skills and Experience: Starting in 2011, I started on a multiplayer modification for Grand Theft Auto: San Andreas that allowed you to script your own experiences (website: www.sa-mp.com). Since that time, my interest in the computer science field has become absolute. Along with Pawn, a type-less 32-bit language implemented in SA-MP, I have come to learn Java when I was in high school during AP Computer Science and while participating in our UIL Computer Science team.

The only item I've ever actually released for use in Java was a voting

desktop application that connected to a web API for secure database functionality and login/permission based voting. The app was used in a private group for officer voting and the group is apart of a larger gaming community.

Alongside the private group is the aforementioned gaming community, attached to Next Generation Gaming. I'm one of four senior developers (those who hold full script access) and have been one off and on since 2013. You can find NGG's website located here: www.ng-gaming.net. The community is entirely multicultural with over 3,000 active members and 90+ staff members from around the world.

Most recently, I spent the past few months as the project lead for a Grand Theft Auto V server for Next Generation Gaming on what was supposed to be the GTA-MP framework. During such time, I hired and managed the development team while also developing the server myself. The GTA-MP framework implemented JavaScript for scripting and as such had to find specialized developers. Sadly, the project team for GTA-MP closed their doors and we had to shut down our project.

I fully believe this shows my ability to work within a largely diverse team and my level of discretion.

As far as writing goes, I've always been fascinated with English and with writing intricate, meaningful stories. I can always help with this on the side.
